NEMA Cast Aluminum Enclosed Starters

9

Product Description

Eaton's combination and non-combination hazardous location cast aluminum motor starters are used in areas where hazardous materials are handled or stored. These units provide disconnecting means, under voltage protection, circuit protection and motor running protection.

Features

- 65,000 AI cUL classified—highest interrupt rated enclosure in the industry
- Copper-free cast aluminum
- Precision machine flame path between box and cover
- Bolt-on slotted mounting feet
- Stainless steel block hinges
- Stainless steel, captive quad-lead cover bolts (disengaged in 1-1/2 turns)
- External stainless steel breaker operating handle
- Breaker and operator shafts are stainless steel
- Ground lug package and installation instructions for termination of ground wire enclosed
- Four point control terminal block, NEMA 1B with wire markers
- Breaker operators can be locked in the ON or OFF position (combination starters only)
- Four plugged 3/4 in NPSM outlets drilled and tapped for control devices
- Standard outlets top and bottom
- Plugged 1/2 in outlets top and bottom for breather/drain
- Components are mounted on a galvanized steel removable pan
- O-ring gasket ensures watertight integrity

Standard Materials

- Bodies and covers: copper-free aluminum
- Cover bolts: stainless steel
- O-ring: neoprene
- Hinges: stainless steel

Finishes

- Bodies and covers: corrosion resistant grey epoxy power coat inside and outside standard to provide Type 4X

Standards and Certifications

Note: See **Tab 17** for additional information on standards and certifications that apply to all enclosed control products.

- UL Classified—Standard 886 File #104565
 - Class I, Groups B, C and D
 - Class II, Groups E, F and G
 - Class III
 - Type 4, 4X, 7 and 9
 - Zone 1, IIB + H2
- CSA Certified—Standard C22.2 File #28361
 - Class I, Groups B, C and D
 - Class II, Groups E, F and G
 - Class III
 - Type 4, 4X, 7 and 9
 - Zone 1, IIB + H2

Code Definitions

Class I locations require the type of explosion-proof electrical equipment where, in case of explosion, the hazardous flames would be contained. In Class II or III locations, dust, fibers and flyings are the combustible materials and it is only necessary to keep these materials out of the electrical equipment (where an arc may take place) and to maintain safe external temperatures.

A brief explanation of the three classifications covering hazardous locations follows:

Class I Locations—are those in which flammable gases or vapors are, or may be, present in the air in quantities sufficient to produce explosive or ignitable mixtures.

Class I, Div. 1—are those where such hazardous concentrations of flammable liquids or vapors exist under normal operating conditions.

Class I, Div. 2—are those where such hazardous concentrations of flammable liquids or vapors are handled in closed containers or closed systems.

Class II Locations—are those where the presence of combustible dust presents a fire or explosion hazard.

Class II, Div. 1—are those where dust is suspended in the air under normal operating conditions, in quantities sufficient to produce explosive or ignitable mixtures.

Class II, Div. 2—are those where such dust is not normally in the air, but where deposits of it accumulating on the electrical equipment will interfere with safe dissipation of heat, causing a fire hazard.

Class III Locations—are those where easily ignitable fibers or flyings are present but not likely to be suspended in the air in quantities sufficient to produce ignitable mixtures.

Class III, Div. 1—are those where ignitable fibers or materials producing combustible flyings are handled, manufactured or used.

Class III, Div. 2—are those where easily ignitable fibers are stored or handled (except in process or manufacture).

Further refinement created for the purpose of testing and approving electrical equipment divides Class I into four separate designations: A, B, C, D and Class II into three separate designations; E, F and G. Underwriters Laboratories test and approve electrical equipment for the following specific groups:

Class I, Group A—atmospheres containing acetylene.

Class I, Group B—atmospheres containing hydrogen, gases and vapors of equivalent hazard such as manufactured gas.

Class I, Group C—atmospheres containing ethyl-ether vapors, ethylene or cyclopropane.

Class I, Group D—atmospheres containing gasoline, hexane, naphtha, benzine, butane, propane, alcohol, acetone, benzol, lacquer solvent vapors or natural gas.

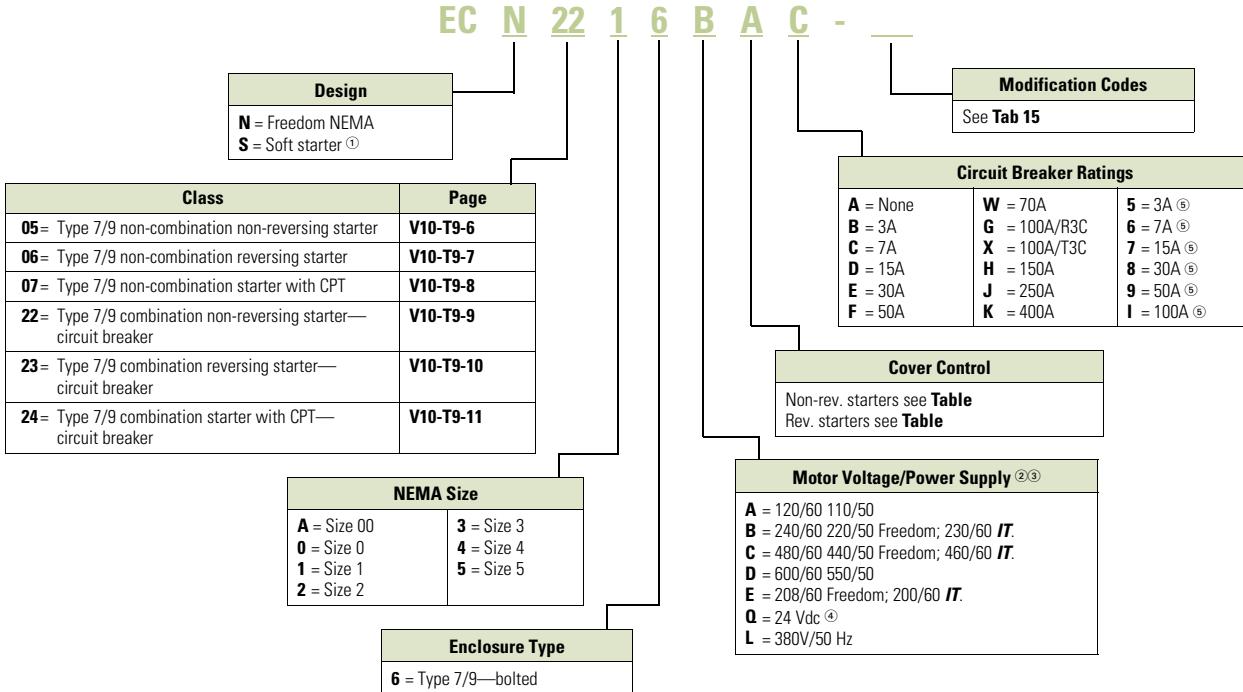

Class II, Group E—atmospheres containing metal dust, including aluminum, magnesium and their commercial alloys, and other metals of similarly hazardous characteristics.

Class II, Group F—atmospheres containing carbon black, coal or coke dust.

Class II, Group G—atmospheres containing flour, starch or grain dusts.

Catalog Number Selection**Type 7/9 Hazardous Location****Notes**

- ① For soft starter information see **Tab 5**.
- ② **IT:** If CPT is selected, power supply to be 120V–24 Vdc.
- ③ Freedom: When control power transformer modification codes (**C1–C11**) are used or when starter class includes CPT (that is, ECN07, 24) see table below for system voltage code.

Code	Primary	Secondary
B	240/480–220/440 wired for 240V	120/60–110/50
C	240/480–220/440 wired for 480V	120/60–110/50
D	600/60–550/50	120/60–110/50
E	208/60	120/60

- ④ Power supply omitted.
- ⑤ Use for Sizes 0–3, HMCP 600V applications only.

Cover Control

To order factory installed pilot devices, change the ninth character of the catalog number to the alpha shown in the table below.

Example: to order an **ECN0516CAA** with START/STOP pushbuttons and a red pilot light, change the **A** to a **C**, that is, ECN0516CCA.

Cover Control**Non-Reversing and Reversing Cover Control**

Description	Factory Installed Flange Control Position 9 Alpha
Non-Reversing Cover Control	
No cover mounted pilot devices	A
START/STOP pushbuttons	B
With red RUN pilot light	C
With red RUN/green OFF lights	D
ON/OFF pushbuttons	E
With red RUN pilot light	F
With red RUN/green OFF lights	G
HAND/OFF/AUTO selector switch	H
With red RUN pilot light	J
With red RUN/green OFF lights	K
START pushbutton	L
ON pushbutton	M
OFF pushbutton	N
Red RUN pilot light	P
Green OFF pilot light	Q
Red RUN/green OFF pilot lights	R
START/STOP selector switch	S
With red RUN pilot light	T
With red RUN/green OFF lights	U
ON/OFF selector switch	V
With red RUN Pilot Light	W
With red RUN/green OFF lights	X
Reversing Cover Control	
No cover mounted pilot devices	A
FOR/REV/STOP pushbuttons	B
With 2 red pilot lights	C
With 2 red/1 green pilot lights	D
UP/STOP/DOWN pushbuttons	E
With 2 red pilot lights	F
FOR/OFF/REV selector switch	H
With 2 red pilot lights	J
With 2 red/1 green pilot lights	K
Two red pilot lights	P
One green pilot light	Q
Two red/1 green pilot lights	R
OPEN/OFF/CLOSE selector switch	V
With 2 red pilot lights	W
With 2 red/1 green pilot lights	X

Freedom Full Voltage Non-Combination**Features**

- Full voltage
- Standard interchangeable heater OLR
- Optional electronic overload
- 600V maximum

Notes

Starters do not include heater packs. Select one carton of three heater packs. For heater pack selection, see **Tab 15**.

Starters with electronic overload, see modification codes in **Tab 15**.

^① For other control power transformer primary and/or secondary voltage options, see **Tab 2**.

Other Hazardous Location Control

Product Description

Besides Freedom starters, Eaton offers Type 7/9 cast aluminum enclosures for solid-state reduced voltage starters and lighting contactors.

Freedom Starters

For information on hazardous location versions, please consult your Eaton representative.

Solid-State Reduced Voltage Starters

Type 7/9 versions are listed in **Tab 5**.

The **IT**. soft starters are designed to be the smallest, most compact soft starters on the market today. The built-in overload (ranges from 0.25 to 1000A) and run bypass contactor (greatly reducing the amount of heat generated) make installation and setup quick and easy.

With this small size and low heat dissipation it can easily fit in the place of existing soft starters, Wye-Delta starters or across-the-line starters where others cannot. To make the retrofit more flexible, we also offer soft starters as open components or as a completed kit on a back panel for easy and quick installation into your existing enclosure.

Lighting Contactors

Type 7/9 versions are listed in **Tab 4**.

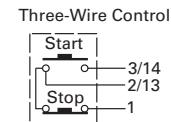

Wiring Diagrams

Freedom Non-Reversing Starter—Single-Phase Non-Combination

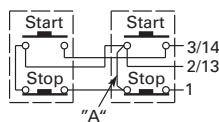

Remote Pilot Devices

Not for Use with Auto Reset OL Relays

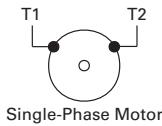

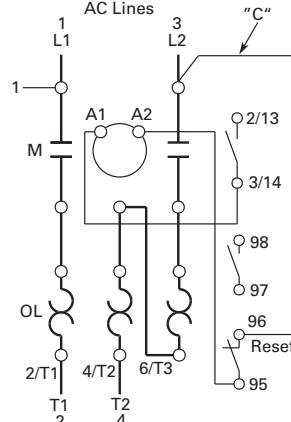

When More than One Pushbutton Station is Used, Omit Connector "A" and Connect per Sketch Below

Connections for Non-Reversing Starter

Figure 1
Front View of Panel

Separate Control

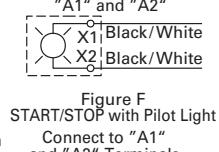

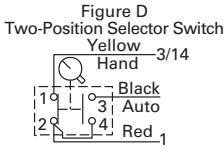

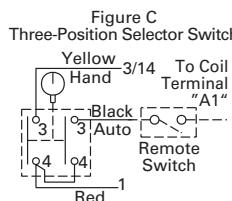

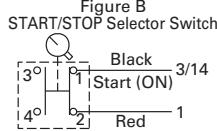

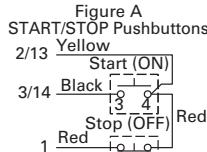

Remove Wire "C" if Supplied and Connect Separate Control Lines to the Number 1 Terminal on the Remote Pilot Device and to the Number 96 Terminal on the Overload Relay

260803 D1

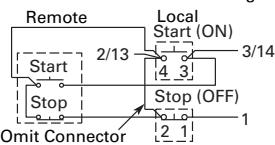

Freedom Non-Reversing Starter—Combination

Connections for Control Stations

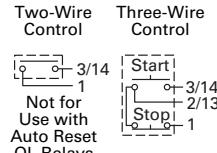

Local Control

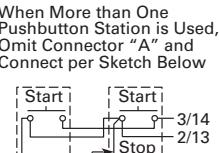

Combined Remote and Local for Figures 1 and 2

Remote Control

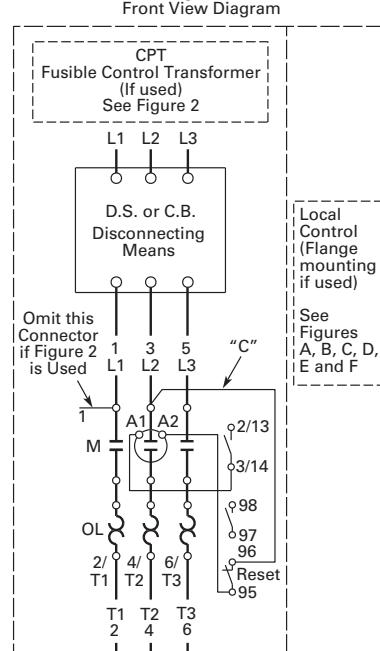

Three-Wire Control
Not for Use with Auto Reset OL Relays

Connections for Starters
